

Sanket Prajapati

DevOps & Cloud Infrastructure Engineer | 4x AWS Certified | CI/CD Automation | Infrastructure as Code

+91-8421927904 | prajapatisanketssp321@gmail.com | linkedin.com/in/sanket-prajapati | github.com/MrSanketPrajapati

PROFESSIONAL SUMMARY

AWS Certified DevOps and Cloud Infrastructure Engineer with hands-on experience designing and operating secure, highly-available 3-tier production architectures. Proven ability to automate deployments using GitHub Actions CI/CD pipelines, provision scalable resources (EC2, ALB, ASG), and manage relational databases (RDS PostgreSQL). Adept at implementing Infrastructure as Code (Terraform) and containerization (Docker/Kubernetes) to ensure operational excellence.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, RDS, IAM, VPC, Lambda, Route 53, CloudFront, Systems Manager/Session Manager, CloudWatch, CloudFormation, CodeDeploy, CodeBuild, CodePipeline), Cloud Cost Optimization

Containerization: Docker, Kubernetes

CI/CD & IaC: GitHub Actions, Jenkins, GitLab CI, Terraform, Ansible, Maven

Languages & Frameworks: Python (Django), Bash Scripting, JavaScript (React), Java, C/C++, Object-Oriented Programming (OOP)

Databases & Monitoring: PostgreSQL, MySQL, DynamoDB, Prometheus, Grafana, SonarQube

Collaboration & Developer Tools: Slack, Trello, GitHub Projects, Async Communication, VS Code, Antigravity IDE, Claude, GLM-5.2

WORK EXPERIENCE

Kiran Academy

Trainee Developer | Python Full Stack

Remote / India

Nov 2025 – Apr 2026

- Designed and provisioned a highly-available **AWS 3-Tier Production Architecture** inside a custom VPC ('192.168.0.0/16') spanning 2 Availability Zones, segregating workloads into 2 public subnets (Web/NAT/Bastion) and 4 private subnets (App/RDS).
- Deployed Nginx/React web servers and Django/Gunicorn app servers on EC2 instances behind public-facing and internal **Application Load Balancers (ALB)**, configuring **Auto Scaling Groups (ASG)** to dynamically scale compute nodes.
- Automated Docker container builds and deployment flows by configuring a **GitHub Actions CI/CD pipeline** that builds images, pushes them to **Amazon ECR**, and triggers EC2 updates via **AWS Systems Manager (SSM) Run Command**.
- Configured a Multi-AZ **Amazon RDS PostgreSQL** database in isolated subnets with strict security group controls, restricting access to App-SG connections on port 5432, and secured secrets using **SSM Parameter Store**.

Primathink Technologies Pvt. Ltd.

Web Development Intern | PrimaDelhiPoint

Remote / India

May 2022 – July 2022

- Developed and launched **PrimaDelhiPoint**, a responsive tourist information and blogging website, utilizing **HTML5**, **CSS3**, and vanilla **JavaScript** to deliver a cross-browser compatible mobile layout.
- Implemented client-side search filtering and interactive UI elements using JavaScript DOM manipulation, optimizing responsiveness and page navigation.
- Collaborated with senior developers in an **Agile** framework to translate design mockups into clean, semantic markup, and managed code versions via **GitHub**.

SELECTED DEVOPS & FULL-STACK PROJECTS

FoodBridge – High-Availability Food Rescue Platform | *Django, React, Docker, GitHub Actions* | [GitHub](#) 2026

- Architected a scalable **AWS 3-tier production infrastructure** deploying React/Nginx and Django/Gunicorn containers on EC2, managed via external/internal **ALBs** and Route 53 DNS routing with ACM SSL certificates.
- Secured database configurations using Multi-AZ **Amazon RDS PostgreSQL** with Database-SG restricting ingress to port 5432 from App-SG only, and stored credentials in **AWS Systems Manager (SSM) Parameter Store**.
- Engineered backend automation tasks (expiry/auto-cleanup) using scheduled **GitHub Actions cron jobs** to execute API post requests, reducing infrastructure runtime cost.

Karvion – FinTech & Tax Compliance Portal | *Django, React, Docker, Terraform* | [Live](#)

2026

- Designed and built a production-grade tax portal using **Django 5.1** and **React 19**, hosting the Unicorn backend on **Render (Docker)** and static frontend assets on **Cloudflare Pages**.
- Engineered secure credential storage with **AES-256-GCM encryption** and set up JWT session validation with token blacklisting to secure API endpoints.
- Built a serverless-style document upload flow using the **Google Drive API** to stream user files directly from requests, achieving zero-local-storage data compliance with automated 15-day purge audit logging.

BIT Code Master – Secure Online Compiler | *Docker, Python, Linux*

2025

- Containerized a secure online compiler using **Docker**, isolating execution environments to prevent unauthorized system access and ensuring safe code execution on a Linux backend.

CERTIFICATIONS

AWS Certified Machine Learning Engineer – Associate	Apr 2026 – Apr 2029
AWS Certified Data Engineer – Associate	Mar 2026 – Mar 2029
AWS Certified Solutions Architect – Associate	Feb 2026 – Feb 2029
AWS Certified Cloud Practitioner	Feb 2026 – Apr 2029
Python Full Stack Development <i>Kiran Academy</i>	Apr 2026

EDUCATION

Bajaj Institute of Technology	Wardha, India
<i>Bachelor of Technology in Computer Engineering</i> <i>CGPA: 7.15/10</i>	<i>Expected 2026</i>
Dr. Panjabrao Deshmukh Polytechnic	Amravati, India
<i>Diploma in Computer Engineering</i>	<i>2023</i> <i>83.89%</i>
Shri Sai Baba Vidyalaya	Sainagar, Amravati, India
<i>Secondary School Certificate (SSC) – 10th Standard</i>	<i>2020</i> <i>88.60%</i>
